Linear is a better way to build products

Meet the new standard for modern software development.
Streamline issues, sprints, and product roadmaps.

Get started >

Powering the world's best product teams.
From next-gen startups to established enterprises.

Unlike any tool you've used before

Designed to the last pixel and engineered with unforgiving precision,
Linear combines UI elegance with world-class performance.

Built for your keyboard

Fly through your tasks with rapid-fire keyboard shortcuts for everything. Literally everything.

Breathtakingly fast

Built for speed with 50ms interactions and real-time sync.

Meet your command line

Complete any action in seconds with

Designed for modern
software teams

Comes with built-in workflows
that create focus and routine.

the global command menu.

Issue tracking you'll enjoy using

Create tasks in seconds, discuss issues in
context, and breeze through your work in
views tailored to you and your team.

Parent and sub-issues. Break
larger tasks into smaller issues.

Automated backlog. Linear will
auto-close and auto-archive issues.

Custom workflows. Define
unique issue states for each team.

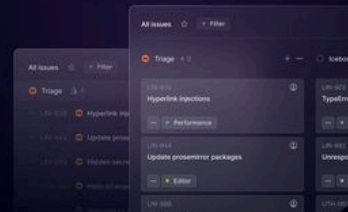

Filters and custom views. See
only what's relevant for you.

Discussion. Collaborate on
issues without losing context.

Issue templates. Guide your
team to write effective issues.

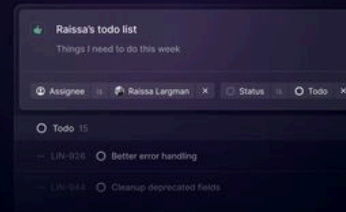

List and board

Switch between list and board layout to
view work from any angle.

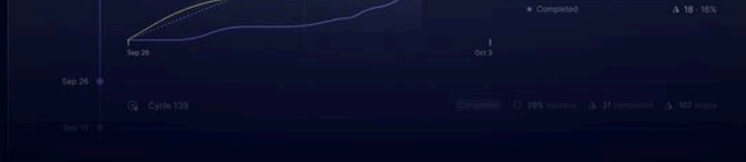

Make it yours

Quickly apply filters and operators to refine
your issue lists and create custom views.

Build momentum with Cycles

Cycles focus your team on what work should happen next. A healthy routine to maintain velocity and make meaningful progress.

Automatic tracking. Any started issues are added to the active cycle.

Scheduled. Unfinished work rolls over to the next cycle automatically.

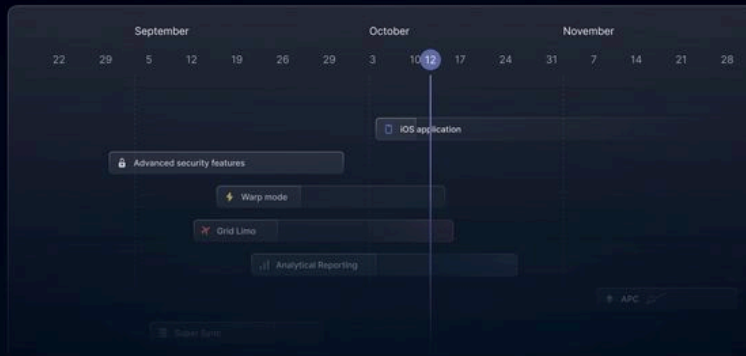

Fully configurable. Define start date, end date, duration, and more.

Predict delays. Get warnings for at-risk cycles.

Scope creep. Understand which issues are added mid-cycle.

Be prepared. Schedule work in advance with upcoming cycles.

Set direction with Roadmaps

Plan visually, collaborate in cross-team projects, and make better decisions with progress insights and project updates.

Multi-team projects. Collaborate across teams and departments.

Project documents. Write project briefs and specs directly in Linear.

Custom roadmaps. Organize projects across multiple roadmaps.

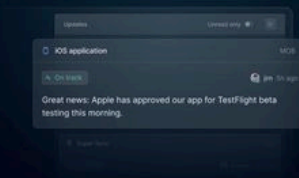

Timeline view. Visualize the product journey ahead.

Project insights. Track scope, velocity, and progress over time.

Personal notifications. Stay in the loop on project activity and updates.

Project updates

Keep everyone up-to-date on the health and progress of projects.

Focus on the big picture

Explore every company project in one view to easily identify what needs attention.

Linear workflows. Exponential results.

From customer support integrations to powerful Git automations, Linear streamlines the entire product development process.

[Discover integrations >](#)

 **GitHub and GitLab.** Sync PRs with issues that close automatically.

 **Slack and Discord.** Create issues and set up alerts.

 **Sentry.** Automatically create issues from code exceptions.

 **Airbyte.** Sync workspace data to external warehouses and databases.

 **Front, Intercom, Zendesk.** Keep a tight loop with your users.

 **Figma.** Embed design files in issues and documents.

Built for the future. Available today.
